

SPECIFICATIONS

BETOFLUID PZ50

Is a colored powder consisting of spherical, submicron particles of amorphous silica. Their extremely small size less than 0.1 μm allows the granules of Betofluid PZ50 to fill the gaps between the larger cement granules (0.1-100 μm). The result is a considerably denser, more compact cementitious matrix for concrete that is cohesive and plastic when fresh, and impermeable and durable when hardened.

TECHNICAL DATA

Product identity

Appearance: Powder

Color: Dark grey

Density: 0.7 kg/Lt at +20°C

Equivalent sodium oxide: $\leq 0.5\%$

Total Chloride Ion Content: Free
